CCR5 antibodies are used for the treatment or prevention of inflammation, defective or aberrant chemotasis of immune cells or T cell antigenpresenting cell interaction, viral infections (specifically human immune deficiency (including its early stages), cytomegalo or pox viruses), autoimmune disease, rheumatoid arthritis, neurodegeneration, Pneumocystis carinii infection, Raposi's sarcoma or any condition associated with detection, diagnosis, prognosis and monitoring of cancers or other hyperproliferative diseases. The present sequence is human G-protein chemokine receptor (CCR5), HDGNR10 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid encoding antibodies to the human CCR5 receptor HDGNR10, useful for treatment, prevention and diagnosis of e.g. cancer, also

The invention relates to a novel human 7-transmembrane receptor, HDGNR10, which has been identified as a G-protein chemokine receptor. The dPCR HDGNR10 polypeptide can be expressed by standard recombinant methodology. Compounds that activate or inhibit the receptor polypeptide, optionally expressed from DNA in gene therapy vectors, are used to treat diseases that requires (a) activation of the receptor (e.g. stimulation of haematopoiseis, treatment of solid tumours, T-cell mediated autoimmune diseases, parasitic infections, psoriasis etc.); or (b) inhibition of the receptor (e.g. allergy, inflammation, rheumatoid arthritis, silicosis etc.). The present sequence represents the human HDGNR10 receptor Claim 7; Fig 1; 22pp; English.

New haplotypes of the human chemokine (C-C motif) receptor 5 gene, useful to diagnose and treat diseases associated with its abnormal expression or function, including human immunodeficiency virus-1 infection.

Claim 29; Fig 3; 61pp; English

The present sequence is that of a polypeptide encoded by the human chemokine (C-C motif) receptor 5 (CCR5) gene of the invention (see ABA97318, ABA97318). The specification describes haplotyping the CCR5 cene of an individual by determining if the individual has one of the CCR5 haplotypes or haplotype pairs fully defined in the specification.

CC CR5 haplotypes or haplotype pairs fully defined in the specification.

The specification also describes an isolated polymucleotide comprising a nucleotide sequence which is a polymorphic variant of the reference CCR5 in the specification and its encoded polypeptide. The methods of the interpretation are useful to diagnose and develop treatment for diseases associated with abnormal expression or function of the gene. The CCR5 isogenes and the screened compounds are useful for treating human immunodeficiency virus (HIY)-1 infection and the progression to acquired immunodeficiency syndrome (AIDS). The invention has antiviral applications. The specification describes genotyping the CCR5 gene of an individual; identifying an association between a trait and a haplotype or individual; identifying an association between a trait and a haplotype or composition comprising a genotyping oligomucleotide for detecting a CCR5 polymorphism, a recombinant non-human organism transformed with CCR5 polymucleotide expressing a CCR5 polypeptide and a method for screening drugs targeting the CCR5 polypeptide and a method for screening drugs targeting the CCR5 polypeptide.

Novel human G-protein chemokine receptor polypeptide useful for diagnostic purposes and for identifying modulators of the polypeptide useful for treating leukemia, autoimmune diseases, psoriasis and allergic reactions.

Claim 7; Fig 1; 22pp; English

The invention discloses a G-protein chemckine receptor (sometimes referred to as a 7-transmembrane receptor) polypeptide, HDGNR10, and the polymucleotide encoding it. G-protein chemckine receptors are involved in signal transduction pathways. The polymucleotide and polypeptide can be protein and these compounds which activate or inhibit activation of the compounds are useful for treating a patient having need to activate or inhibit a G-protein chemckine receptor. The compound is administered by providing to the patient DNA encoding the agonist or administered by providing to the patient DNA encoding the agonist or an expressing them in vivo (gene therapy). The compound is disease or susceptibility to a disease related to an under-expression of the protein, for chromosome identification or as immunogens for producing antibodies. Agonists are useful in stimulating haematopolesis, wound healing, coagulation, angiogenesis, to treat solid tumours, chronic infections, learkeamia T-cell mediated auto-immune diseases, parasitic infections, psoriasis and to stimulate growth factor activity allergy, anthropolated allergic reactions, or activity anaphylaxis, anaphylax

Mack DH, Hevezi PA, Gish KC, Aziz N, Zlotnik Mfar D,

2003-354600/33. N-PSDB; ACC72740. New genes that are up-regulated or down-regulated in cancers, useful a markers for diagnosing e.g. cancer, ischemia or heart diseases, or as therapeutic targets for screening drugs for treating these diseases.

Claim 12; Page 745; 767pp; English.

The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down-regulated in specific cancers (e.g. about 1013 genes up-regulated in cutellymphocytic leukemia). ACC72641 to ABC702860 represent cancer related gene nucleotide sequences which encode the proteins given in ABRS8109. Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (1); (6) specifically targeting a compound to a pathological cell in a patient by administering to the patient the antibody above; and (7) a patient by administering to the patient the antibody above; and (7) a patient by administering to the patient, the nucleic acid is useful for therapeutic targets. In particular, the nucleic acid is useful for diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary, bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary, and cancer of anorreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in a pathology, e.g. cancer is nucleic acid is also useful in a pathology, e.g. cancer is nucleic acid is also useful in a pathology. pathologies

The invention relates to a method for treating an urological disorder which comprises assaying the ability of the compound to modulate 313, 313, 5464, 188717 or 3354 mucleic acid expression or polypeptide activity. The method is useful for identifying a compound for treating urological disorder comprising urinary incontinence e.g., overactive/oversemaitive bladder, overflow urinary incontinence, stress urinary incontinence caused by defunction of the bladder, urethra or central/peripheral nervous system prostatitis, benign prostatic hyperplasia, prostate cancer or kidnay disorders. It is also used in gene therapy. The present sequence is human C-C chemokine receptor type 5 (CCRS, 333) protein. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                        Human; urological disorder; stress urinary incontinence; prostate cancer; benign prostatic hyperplasta; overactive bladder; oversensitive bladder; oversilow urinary incontinence; gene therapy, nephrotropic; prostatitis; kidney disorder; C-C chemokine receptor type 5; CCR5; receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying a compound, capable of treating urological disorder e.g., benign prostatic hyperplasia, by assaying the ability of the compound to modulate 313, 333, 5464, 188717 or 33524 nucleic acid expression or polypeptide activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 352;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 96; DB 6; Length 35

The invention relates to a method of producing an antibody, involving immunising an animal with a human G-protein chemokine receptor (HDGNR10) polypeptide (also referred to as a human 7-transmembrane receptor) and recovering an antibody which binds the polypeptide. The method is useful for producing an antibody which binds specifically to the human G-protein chemokine receptor polypeptide. This sequence represents the HDGNR10 polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                       Producing an antibody, involves immunizing an animal with a polypeptide or with a polypeptide encoded by the human G-protein chemokine receptor clone in ATCC 97183, and recovering the antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, chemokine receptor, CCR5, viral infection, surface protein, respiratory virus infection, respiratory syncytial virus infection, RSV infection, bronchiolitis, bronchitis, pneumonia, asthma.

The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The provise is that the cell chemokine-receptor is not CX3CR1 and that the virus in the tire receptor is not cx3CR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis, bronchitis, pneumonia or asthma 100.0%; Score 96; DB 6; Length 352; 100.0%; Pred. The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (i) an isolated antibody having high specificity and high affinity or anticly for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs and in the production of specific antibody against a particular GPCR. (I) can be useful in detecting an entibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, immunological-related diseases, cell regeneration-related diseases, growth-related diseases, cell corresponding GPCRs. The antigenic peptides for treating immune-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, eg. AIDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, atherosclerosis, bacterial, fungal, protozoan or viral infections, atherosclerosis, bacterial, fungal, protozoan or viral infections, cellialmmation, allergies, Crohn's disease, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, cancer, cellialmmation, allergies, cancer, cardiomyopathy, chronic and acute cinflammation, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis, ABZ42289 encode GPCR proteins given in ABP81675 to ABZ42869 encode GPCR proteins given in ABP81675 to ABZ42869 encode cemplification of the present invention

This protein sequence comprises an Ala127Leu variant of a novel human macrophage-selective CC chemokine receptor (see also AAW23835) that has been designated CCR5. The sequence was deduced from an isolated cDNA clone (see AAT76919). The conservative variation should not affect the activity of CCR5. The susceptibility of human macrophages to HIV confection depends on cell surface expression of CD4 and CCR5. CCR5 is a member of the 7-transmembrane superfamily of G-protein coupled cell surface molecules. It plays an essential role in the membrane fusion step of infection by some HIV isolates. The establishment of stable, non-human CC infection by some HIV isolates. The establishment of stable, non-human CCR and CCR5 provides valuable tools for research of HIV infection.

Antibodies that bind to CCR5, CCR5 variants, and CCR5-binding agents capable of blocking membrane fusion between HIV and target cells of HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Prostaglandin; PG; B2BP3 receptor; B2BP2 receptor; CCR-5; human; chemokine receptor; ss2 adrenergic receptor; small G-protein rho; renal outer medullary potassium ion channel protein; ion-channel protein; lambda phage repressor protein; G-protein coupled receptor; bacteria; biochemical; vaccine; immunohistochemical; orphan receptor; HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC chemokine receptor 5 polypeptide - used to inhibit membrane fusion between HIV and a target cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

                                                                                                                                                                                                                                                                                                                                   The invention relates to screening for a modulator of human immunodeficiency virus (HIV) or simian immunodeficiency virus (SIV) or infection, comprising contacting a first composition having an HIV or simian immunodeficiency virus (SIV) as forced composition having an HIV or SIV envelope protein in the a second composition having an HIV or SIV envelope protein in the presence or absence of a compound. Also included are screening for a modulator of HIV infection, detecting HIV infection of cells (comprising contacting a cell that has been recombinantly modified to express at least one of human chemokine receptors 86C and 88-2B with HIV, and detecting HIV infection of cells (comprising contacting cells with an antibody to at least one of human chemokine receptors 86C and 88-2B with HIV, and detecting HIV infection of the cell after the contacting step). The methods and compositions of the present invention are useful for the diagnosis and treatment of disorders associated with the aberrant expression or activity of 88C or 88-2B chemokine receptors, such as atherosclerosis, rheumatoid arthritis, tumour growth suppression, asthma, viral infection, AIDS and other inflammatory conditions. The genes for human 88-C and 88-C B are located on chromosome 3921. The present sequence represents human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                     Screening for a modulator of HIV and SIV infection utilizing polynucleotides that encode the 88C or 88-2B chemokine receptors, useful for diagnosing and treating disorders such as atherosclerosis, arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC chemokine receptor 5; CCR5; G-protein coupled receptor; human immunodeficiency virus; HIV; CD4; AIDS; therapy; transgenic animal.

The invention provides isolated nucleic acid sequences that encode rabbit prostaglandin (PG) E2EP3 receptor, human PG E2EP2 receptor, rat renal outer chemokine receptor CRF-5, human se2 adrenergic receptor, rat renal outer medullary potassium ion channel protein or human small G-protein rho, together with deduced protein sequences. Also provided is a method for the production of enkaryotic proteins by culturing bacteria transformed with vectors containing the above nucleic acid sequences or a nucleic acid (I) that comprises: (i) first sequence that encodes either a DNA-binding protein, or a lambda phage repressor protein, placed upstream of, and in frame with, (ii) a sequence encoding a protein, placed upstream of, and in frame with, (ii) a sequence encoding a protein, (I) are used for recombinant production of eukaryotic proteins, particularly membrane proteins groteins are useful for biochemical or structural studies; and in the protein are useful for biochemical or structural studies; and indignostic and screening assays and as antigens for use in vaccines, and for raising antibodies that are useful cannels. Antibodies raised against the chemokine receptors or ion channels. Antibodies raised against the chemokine receptors or ion channels. Antibodies raised against the chemokine receptor CCR-5 can be used (when administered as antiserum or generated in vivo) to prevent control of the party of human immune deficiency virus (HIV) into cells
                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid constructs for high level expression of eukaryotic proteins in bacteria, for producing e.g. chemokine receptor CCR-5 for preventing HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 49-53; 81pp; English

ab Macaca

```
This polypeptide sequence comprises macaque chemokine receptor 88C, a G protein coupled receptor that is involved in leukocyte trafficking. Its amino sequence was deduced from a 88C DNA (AAR85163) isolated by PCR amplification. It shows 97% identity to human 88C (AAM27123). 88C receptors and their polypeptide fragments can be produced in transformed host cells. The receptors, peptides comprising one or more of the extracellular or intracellular domains, and anti-receptor antibodies can be used to modulate receptor activities, particularly ligand and G protein binding, and are potentially potentially useful in the treatment of atheroslerosis, rheumatoid arthritis, tumours, asthma, viral infection, AIDS, inflammatory conditions, pathological immune response, abnormal haematopoietic processes etc. A hybridoma that produces an antibody that specifically binds to macaque 88C is claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                New nucleic acid encoding chemokine receptors 88-2B and 88C - used modulate leukocyte trafficking, e.g. for treatment of inflammation, tumours, viral infections, auto-immune diseases, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-09-79-84-12.

Sequence 2. Application US/09759841

Patent No. US20010039026A1

GENERAL INFORMATION:

APPLICANT: Rickett, Graham A

APPLICANT: Rickett, Graham A

APPLICANT: Perros, Manoussos

TITLE OF INVENTION: Assay Method

FILE REFERENCE: PC10348APME

CURRENT APPLICATION NUMBER: US/09/759,841

CURRENT FILING DATE: 2001-01-12

PRIOR PILING DATE: 2000-01-12

PRIOR PILING DATE: 2000-01-12

PRIOR PELICATION NUMBER: GB 0000661.9

PRIOR PILING DATE: 2000-01-12

PRIOR PILING DATE: 2000-01-12

PRIOR PILING DATE: 2000-01-12

PRIOR PILING DATE: 2000-01-12

PRIOR FILING DATE: 2000-01-12

NUMBER OF SEQ ID NOS: 6

SOFTWARE: PatentIN Ver. 2.1

SEQ ID NOS: 6

Sequence 2, Application US/09339912A;
Fatent No. US20020099176A1
GENERAL INFORMATION:
APPLICANT: Li, Yi, APPLICANT: Li, Yi, APPLICANT: Li, Yi, APPLICANT: Ruben, Steven, M.
TITLE OF INVENTION: Antibodies to Human G-Protein Chemokine Receptor HDGNR10;
TITLE OF INVENTION: (CCRS Receptor);
TITLE OF INVENTION NUMBER: US/09/339,912A;
CURRENT PAPLICATION NUMBER: 09/195,662;
PRIOR FILING DATE: 1999-06-5;
NUMBER OF SEQ ID NOS: 9
SOFTWARE: PatentIn version 3.0;
SEQ ID NO 2
LENGTH: 352

Sequence 2, Application US/09502783A

Patent No. US20020132269A1

GENERAL INFORMATION:
GENERAL INFORMATION:
TO SEQUENCE 1, Yi

APPLICANT: Li, Yi

APPLICANT: No Wide Encoding Human G-Protein Chemokine Receptor (CCR5)

FILE REFERENCE: 1488.115006

CURRENT APPLICATION NUMBER: US/09/502,783A

CURRENT PILING DATE: 1995-06-06

NUMBER OF SEQ ID NOS: 9

SOFTWARE: Patentin version 3.0

SEQ ID NO 2

LENGTH: 352
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DENG, HONGKUI

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Drobable zinc-finger protein - Arabidopsis thaliana
N.Alternate names: protein T17J13.200
C.Species: Arabidopsis thaliana (mouse-ear cress)
C.Species: Arabidopsis thaliana (mouse-ear cress)
C.Date: 20-Apr-2000 #sequence_revision 20-Apr-2000 #text_change 20-Apr-2000
C.Accession: T48016
R.Rieger, M.; Mueller-Auer, S.; Zipp, M.; Schaefer, M.; Mewes, H.W.; Lemcke, K.; Mayer, Pstreiger, C. the Protein Sequence Database, February 2000
A.Recession: T48016
A.Status: preliminary
                                                                                                                                                                                                                                                                                                                                                                                                                               A)Description: pre-mRNA splicing A,Note: necessary for the stable interaction of mRNA precursors with the snRNP component: C,Keywords: nucleus; pre-mRNA splicing; transmembrane protein F;429-445/Pomain: transmembrane #status predicted <TMM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                C,Accession: T49799

Chen Z., Gettie A., Ho D.D., Marx P.A.;

"Primary SITVS isolates use the CRS correcptor from sooty mangabeys
naturally infected in west Africa: a comparison of correceptor usage
of primary SIVSM, HIV-2, and SIVMac.";

Virology 244:113-124(1998).

-I. FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,

MIP-1-beta and RANIES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or

differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

RI AIDS Res. Hum. Retroviruses 15:931-939(1999).

- I FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, C.C. increasing the intracellular calcium ions level. May play a role intracellular calcium ions level. May play a role differentiation.

- SUBCELLULAR LOCATION: Integral membrane protein.

- SUBCELLULAR LOCATION: Integral membrane in moverne modified medities requires a license agreement (see by and for commercial medities requires a license agreement (see by and for commercial medities requires a license agreement (see by non-profit integral protein.

- SUBCELLULAR LOCATION: Integral license agreement is not removed. Usage by and for commercial membrane and an email to license@lisb-sib.ch).

increasing the intracellular calcium ions level. May play a role

differentiation.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

-! FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of gramulocytic lineage proliferation or

Sequence evolution of the CRR5 chemokine receptor gene in primates.";
Mol. Biol. Evol. 16:1145-1154(1999).
I-FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
I-FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 differentiation.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            IS-MAR-2004 (Rel. 43, Created)

Mol. Biol. Evol. 16:1145-1154(1999).

-!-FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or integration.

"ffrentiation. Triegral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Submitted (AUG-1999) to the EMBL/GenBank/DDBJ databases.
-!-FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
differentiation.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SUBCELLULAR LOCATION: Integral membrane protein.

Biol. Bvol. 16:1145-1154(1999).
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha, MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota; Metazoa; Chordatā; Craniata; Vertebrata; Euteleostomi;

Sequence evolution of the CCRs chemokine receptor gene in primates.";
Mol. Biol. Evol. 16:1145-1154(1999).
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleoscomi,

"Sequence evolution of the CCR5 chemokine receptor gene in primates.";

"Nol. Biol. Bvol. 16:1145-1154(1999).

"Increasing the intracellular calcium ions level. May play a role in the control of granulocytic lineage proliferation or differentiation.

-! SUBCELIULAR LOCATION: Integral membrane protein.

-! SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

"In The Complex Section of CC type chemokine. Binds to MIP-1-alpha,
MIP-1-beta and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level. May play a role
in the control of granulocytic lineage proliferation or
differentiation.

"Chemokine receptor expression in cultured glia and rat experimental allergic encephalomyellitis.";
J. Neuroimmunol. 86:1-12(1998).
INP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level.
INCELLULAR LOCATION: Integral membrane protein.
-:- SUBCELLULAR LOCATION: Integral membrane protein.
-:- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
